

CREATING USER METRIC PATTERNS  
INCLUDING USER NOTIFICATION

5

ABSTRACT

Exemplary embodiments of the present invention include a method for creating a user metric pattern. Such embodiments typically include receiving, within the network, a plurality of disparate user metrics, determining that the plurality of disparate user metrics received within the network do not match a predetermined metric pattern, and saving the plurality of disparate user metrics as a new metric pattern. In many embodiments, determining that the plurality of disparate user metrics received within the network do not match a predetermined metric pattern includes comparing the plurality of disparate user metrics with a plurality of metrics associated with the predetermined metric pattern.
